

# Money Dominoes

## How to Play:

1. Print and cut out the attached money dominoes.
2. Mix up the dominoes.
3. Find the “start” domino and place it on the table. Count up the total value of the coins on that card (e.g.  $25c + 25c + 10c = 60c$ ) and find the domino with the written numerical form ( $\$0.60$ ).
4. Place the matching domino beside the domino that’s already on the table.
5. Repeat these steps until all dominoes are correctly placed on the table and you’ve reached the “end.”

Alternatively, you can create your own money dominoes using the blank template provided. Have fun!
